

Performing a bin change

Completing a correct bin change is important so the weight of the bin does not get recorded as waste!

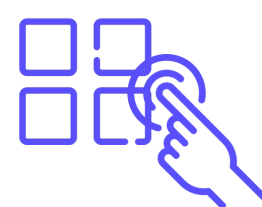

In order to make sure bin changes are done the right way, follow these steps accordingly:

1

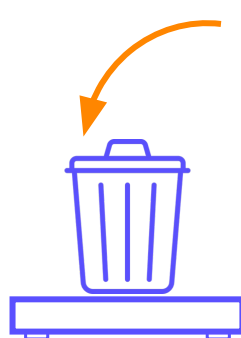

Remove the old bin
from the system

2

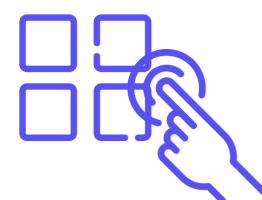

Press
Ignore

3

Place the new bin
on the scale

4

Confirm
Bin Change

Note

If you're using a Winnow Vision system, please make sure the bin is placed right under the camera and not touching the wall. This is to make sure you have good-quality images.
